

STOPS

Shopping List App Wireframe

Idea 1 :- Shopping list that shows comparison of prices ~~at~~ ^{of nearby} grocery locations. After writing/making a list of items needed, user will be shown price comparison at selected ^{/preferred} grocery chains allowing a choice.

LAYER 1

Layers to website/app
functionality

→ Enter Items needed to purchase

Check + Uncheck boxes for items on list

Permanently remove items on the list

- Utilize auto-complete/dropdown menus.

LAYER 2

→ Comparison of products ^{prices} using current location and price database
eg. searches for list item at nearby grocery store website

→ Adds total of all selected items at different groceries for comparison.

LAYER 3

→ Finds nearby groceries by zip/preference

→ Finds prices at groceries (app would have to query database or website for price information)
